NEWS FROM THE CHURCHES.

FEATURES OF THE RELIGIOUS SER-VICES TO-MORROW.

Sermon on Christian Unity at Grace M. E. Church-Dr. Twitchell's Tenth Anniversary-Colebration of the Event-Rev. Mr. Tope a Former Townsman-Other Events of Interest.

Grace M. E. church observes the holy sacrament the first Sunday of each month. In the evening the pastor will preach on Christian Unity, the special topic being "Many Folds, But One Flock."

All ministers are invited to preach or this subject the first Sunday in June: Is there any way by which existing denominations may continue and complete Christian unity be realized?

AT DWIGHT PLACE CHURCH. The tenth anniversary of Dr. J. E. Twitchell's pasterate will be celebrated Sunday and Monday. Dr. Twitchell has been asked to preach an anniversary sermon to-morrow morning, and in the evening there will be several addresses. President Dwight, Dr. Newman Smyth and Dr. Edwin Harwood are among the speakers. The public is in-vited to these services. On Monday evening there will be an anniversary social and reception to Dr. and Mrs. Twitchell by the members of the congregation. The city pastors of the Congregational churches have been invit-A souvenir commemorating the occasion will be presented to the guests on Monday evening. AT THE M. E. CHURCH IN WEST-

VILLE.

Rev. Howard W. Tope will preach in the M. E. church, Westville, on Sunday evening, June 2, at 7:30. Mr. Tope was brought up in Westville, and we believe his former townspeople will give him a cordial welcome and that he will have the inspiration of a large congregation. A collection will be taken in aid of the International Christian Workers' association, which he represents. JUVENILE TEMPLARS.

The juvenile templars of New Haven will hold a special meeting at 401 Chapel street, at 4 o'clock Sunday afternoon. The grand superintendent of juvenile work will address the meet ing. All friends of temperance are invited. Mrs. Whistler, the superintendent of the temple, will be present.

G. A. R. MEN AT CITY MISSION HALL

A Soldiers' Service Next Sunday Evening. To a letter of invitation from Rev. Mr. Mossman, of the City Missionary negotiation, the following reply has been received, which explains itself: Headquarters Admiral Foote Post, No.

17. Department of Conn., Grand Army of the Republic. New Haven, Conn., May 28, 1895. Rev. W. D. Mossman, Missionary Pas-

tor, New Haven, Conn.; Dear Sir:-Your communication of the 25th inst., inviting the comrades of Admiral Foote Post, G. A. R., to attend a oldiers' service to be held at the City Mission hall on the evening of Sunday June 2d, and to appoint a committee from the post to conduct the service was accepted by the post.

Commander Thompson has appointed he following named comrades as a ommittee in accordance with your request: Charles E. Hart, Robert Langfale, Charles A. Baldwin and D. S.

Thanking you in the name of the post for your courteous invitation, have the honor to be very respectfully yours, F. G. HASTINGS, Adjutant.

In preparation for this service flow-ers in abundance are wanted at the City Mission hall, corner of Court and State streets, this (Saturday) afternoon. With the great variety now in blossom in the city and in the woods near by, there need be no lack if those who can or will bring them. A single handful of wild flowers from any of the children, or a few out flowers from the homes of hose who care for the soldiers living or lead, will be acceptable to the commite of ladies who will be at the hall this afternoon and evening to attend to the decorations. Flowering plants in som, marked with the owner's name, may be safely left in care of the lanior and called for again on Monday af-

Old soldiers who are Grand Army men are requested to wear their uniforms. There will be special musical selections, as well as ongregational singing and the decoraons for the hall will include flowers flags, stands of arms, etc.

THE HOUSE OF THE MIND.

Something About the Human Brain-Anatomy of the Mind-The Centers of Sight, Hearing, Smell, Taste and Speech -Brain Areas Which Control Muscular Movements-Experiments With Lower Animals-The Seat of consciousness.

(Rene Bache in the Hartford Times.) Something is just beginning to be known about the anatomy of the human mind. Recent discoveries respecting its physical structure have thrown light upon the most interesting of all problems-namely, that which has to do is now understood in a general way, and with a fair degree of accuracy, where and how ideas of various kinds origigray matter. The organ of thought has been divided up into sections, as it were, which are severally responsible for the creation of ideas and images of many classes, Certain areas of brain surface are recognized as controlling vision, hearing, taste, smell and vocal speech, while others govern the muscular mechanism of the body. If you move your big toe, you direct its moion by orders conveyed from a point of the cerebral cortex directly beneath the very middle of the top of the skull.

At the University of Pennsylvania, Philadelphia, important work in this line of scientific research is being carried on just now, under the direction of Dr. Lightner Witmer. He has a laboratory fitted up with all sorts of queerooking machinery for finding out how long it takes people to think—to see, to hear, to feel, to distinguish colors, and other such things. There are models of brains, which one may take apart and cut and make a new individuality. We put together again as if they were Chiese puzzles. Every detail of structure is reproduced in these models—even to above expressed would lead to the con he "pineal gland," which, though located at the base of the brain, is in reality a rudimentary third eye. The sm- as "perhaps an omnibus." ients believed that this gland was the eat of the soul.

Most of the knowledge thus far obtained respecting the physical anatomy of the mind has been gotten by studyng the brains of lower animals, chiefly led into a good many errors by assumplons of that kind. Nevertheless, the ikeness in a general way between the that of a simian or canine quadruped is sufficiently close for ordinary purposes. Unfortunately, it is not practicable to make experiments upon living human brains, save in exceptional cases where operations have to be performed on them. But it is very easy to emove a portion of the skull of a money and to observe how the beast acts when stimulation-electricity is usually employed for the purpose—is applied to one portion or another of the surface.

Though such operations may cruel, knowledge most valuable to the human race has been obtained through them. Acquaintance with the so-called motor areas has become so accurate that a disease of a part of the brain can usually be located with exactness by observation of the muscles of the body. abnormal wiggle of the big toe ald lead the physiun to look for in the middle of the top of the head. May be there would be no cure for it, and then again perhaps somehing might be done. If it were ascertained that the patient had received a plow there, it might be imagined that a fracture previously unsuspected had oc-curred, causing pressure on the brain. In that case relief would probably be

obtained by trephining. An interesting instance on record is that of a girl who was suddenly seized with paralysis of one side of the face, accompanied by loss of power of speech. Within three or four days the paralysis eassed downward from the arm to the body, and finally to the leg on the same side. It was decided at a consultation of doctors that the symptoms indicated a brain hemorrhage at the center of speech, progressing up the fissure of girl died, and a post mortem examina-

tion disclosed the fact that this was exctly what had occurred. The fissure of Rolando runs across the top of the head from side to side and alost from ear to ear. In and out of it ook Down, O Lord Elijah are located the most important motor areas, which govern the muscular movements of the body. The highest point corresponds to the toe. Following the fissure down the side of head toward the ear, comes the leg, next the arm, and finally the face. That portion which represents the face is much more highly differentiatedthat is, split up into a great many

In one recorded experiment a part of the skull of a monkey had been removed. The operator stated that by stimulating the proper motor areas with electricity he would cause the anitherspoon, who has sung with great mal to go through a certain series of cess at several concerts in New York movements. It would extend its arm, grasp an object which had been placed before it, carry it to the face and put it Il sing the solo part in Rossini's into the mouth. This the beast did ex-charity," the other parts being sung actly as foretoid. However, it was not Mrs. Booth, Miss Sanford and so wonderful as it seemed; for the monkey was merely going through a move ment that was customary and habitual with him, and it was only necessary to stimulate the areas governing the arm and hand. The motor areas may be

said to control habitual movements rather than individual muscles. Close by and associated with the area representing the face is that of vocal speech. This latter area is so highly differentiated that each letter and nu-meral seems to possess its own special tract. There is a case on record of man who forgot the letters B. P. O. X and Y, and the numerals 6, 7 and 8. other respects he was all right. But he could not read, because the letters mentioned were unknown to him. Of course he could not write either, any more il former soldiers and sailors are than one could do writing with a type-

writer that had lost those five letters. He was unable to add 2 and 6, because 6 was unknown to him. When he tried to write out the word "six" he could only get as far as the first two letters,

inasmuch as X was forgotten. Another interesting case was that of banker of Frankfort, Germany. He was a first-rate business man and possessed a wonderful memory. It was his boast that he never forgot anything. All of a sudden his memory left him enwas found that he had always depended upon sight for remembering every-the blind, thing; he was what psychologists term a "visualist." In some manner un-the intelliknown his visual centers had become impaired. To restore them again was neans of hearing-that is to say, by

training the auditory centers. People remember things in different according to the habit of the individual. For example, you ask one man when Columbus discovered America, and he will reply 1492 promptly. The nerves, of course, are signal lines having a visual picture of the figures by means of which the brain, shut up forming that date in his mind. But another person will recall the date not in that manner at all, but by sound. In the latter case it may be the centers of hearing that furnish the memory, but it is more likely to be those of vocal words, spelling them by reading them afraid of sounds than of sights; they off as if from a blackboard. Lots of will jump at the thunder and take no folks have no such pictures at all. Most notice of the lightning. The difficulty of them seem to depend chiefly, if not is found in making such experiments wholly, upon the habit of using the letters and syllables in certain forms in dog has been kept for a year after the

The part of the brain belonging to and representing each sense-seeing, tomaton, able to eat and walk about, hearing, or what not-seems to be a though incapable of volition or of formcaring, or what not-seems to be a complete little brain in itself. The complete little brain in the use of done with frogs, which remained per base visual brain for purposes of memhis visual brain for purposes of mem-ory, and was obliged to begin like a child and train his auditory brain. The rator, whose words pour out in an eloquent flood as if self-inspired, possesses enters of vocal speech which are highy developed, constituting in themselves brain capable of doing its own think-This idea may acing, as it were. count for instances of dual personality, where a man suddenly loses all recollection of his past and is obliged to start of us instead of one, and clusion that each of us is several.

The most satisfactory evidence resremoving certain portions of the brain of lower animals, in order to observ what they would do without them. If dogs and monkeys. It does not always the part of the gray matter represent-follow that what is true of a monkey is ing vision be taken away, for example, true of a man, and scientists have been the dog or monkey will be blind, though its eyes are not interfered with. same idea applies to the other senses Vision is located in the back part of the thinking organ of a human being and human brain. Along the side of the that of a similar or canine quadruped is brain above the ear runs nearly horinontally the fissure of Silvius. Not far from the middle of this fissure is the center of hearing. Close by is the cen-ter of smell, and beneath and inside of this fissure is tasts. It is hardly necessary to explain that the two halves of the brain are just alike, each sense center and motor area on one side having its fellow on the other side. But the right hand hemisphere of the brain orresponds to the left-hand side of the

oody, and vice versa. The intelligence and moral perception seem to be located chiefly in the front part of the brain, behind the forehead. Here are the higher physical centers. If the physical structures representing them suffer damage, aberrations of character and intellect result. When parts of these frontal lobes have been removed, a dog loses memory and various other faculties. Seeing food, the animal does not recognize it, though hungry; or perhaps it will run past it and not turn to get it, because the recdiection of it has vanished the moment it is out of sight. Tests for vision, hearing and smell are not easily made satisfactory. If the beast subjected to experiment jumps for a bone, pricks up ts ears, or sniffs, the evidence is as rood as can be obtained.

Underneath the brain of a human being is a small secondary brain which is called the cerebellum. So well as

an be ascertained, it does not do any thinking, but has to do merely with pertain muscular control of the book, Without it one wouldn't be able to stand upright, for it governs the equilibrium. What may be termed the sense of equilbrium is connected with the semi-cirular canals of the luner car. Seasickness may be said to begin in the thich starts from the shaking about of the liquid in the cana's referred to, tirely. He could not even remember the thus producing a sensation of dizziness, street or the house he lived in. Then it it has been observed that dear people are less sunject to seauchness than are

> Where in the brain is the center of the intelligence and of consciousnessthe sent of the soul?

As has been stated, the ancients deevidently impossible, and so he had to clared that it was in the pineal gland, begin to acquire a new memory by As a matter of fact, in the opinion of As a matter of fact, in the opinion of modern psychologists, it is no particu-They say that the intelligence, or soul, or whatever one chooses to call it, is the sum of all the faculties of the brain, each of which is represented by its particular structure.

But in a tight box of bone, knows what is se not going on in the outside world. So sensitive is the apparatus that the touch of a finger on the typewriter key rever berates through the whole bodily system. A very loud sound will stop the The best spellers are visual- heart, producing a sensation of dread. sts—they see mental pictures of the Human beings, as a rule, are more with animals as are here described. semoval of its cerebral hemisphere entire, being thus reduced to a mere nu-The same thing has ing ideas.

So great has the popular interest in this subject become that many peo ple nowadays leave their brains by wil to physicians or to institutions, in or-der that they may afford material for study. When an autopsy is performed it is a very common thing for the doc tors to carry away the brain surrepti tiously, for preservation in alcohol, or perhaps for cutting up into sections. This is worth looking out for in cassurviving relatives are desirous that

Rolando and involving the areas corresponding to the arm and leg. The Beware of imitations. Ask for the genuine JOHANN HOFF'S MALT EXTRACT "What a Lovely Complexion!"

"Isn't her complexion charming!" These are expressions we hear every day, made by women in reference to others, which reveal a pardonable envy,

and one which can be gratified.

The secret of good health, as indicated by a rich color, and well-rounded figure, is found in a good digestion. Shopping tours, dances and entertainments indulged in, will leave you utterly fagged out, unless you are obtaining all the value from your food; and it is so easy to accomplish this that you will wonder no one has spoken to you of it before.

Try with each meal, and at bed-time, a wineglassful or more of the Genuine Johann Hoff's Malt Extract, which you will find to be most acceptable to the palate as a beverage, and will lift you right on to the plane of the vivacious and trim-figured sister you admire so much, and who seems capable of enduring endless fatigue.

Then, again, we must remember the nursing mother, where two lives are dependent upon the proper nourishing of the one. Surely nothing can be more valuable to the mother, nor give more comfort to the baby, by producing a generous flow of milk, than the

GENUINE JOHANN HOFF'S MALT EXTRACT.

Defective nutrition is the foundation of all ailments. A healthy, well-neurished body can withstand almost any disease. There is resistance power in such a body.

I have been taking the Genuine Johann Hoff's Malt Extract myself for a year or so, and find it an exceller tonic and petizer. Without doubt it is the best Malt Extract the man A. A. Waiserself. BEWARE OF STATIONS.

The genuine has signature Johnson Hoff on Neck Label. **米粉卷份条约条卷份条约条份条**

At Home

You may have what thousands visit Europe for yearly, that is the natural Sprudel Salt of Carlsbad. It is obtained by evaporation at the Springs, and is identical with the waters in its action and results, which are the same to-day as when Emperor Charles IV. was cured four bundred years ago, and later George III., Peter the Great, and Maria Theresa benefited by their use. They aid digestion, cure constipation, and purify the blood.

He were to obtain the genuine ins-ported article, with the signature of "Einer & Mendelson Co., Sole Agents, New York," on the bottle.

No Harm Intended .- Pastor -- It would surprise you to know how much counerfelt money we receive in the contribution boxes in the course of a year Thoughtless Friend-I suppose so. How to you manage to work it all off?-Puck. The Inquiry Ran Chiefly to Specialties and

the Industrials. New York, May 31.-The stock market was comparatively quiet to-day. The inquiry ran chiefly to the specialties and industrials, although the railway list was not neglected, by any means, London bought a small line of St. Paul and other of its favorites, but not enough to have any influence on the market. The grangers were in somewhat better request and closed generally a fraction better on the day, the reports from the west that much needed rains had fallen having checked the selling in this group. The low priced fancies, however, were the features. Mobile and Ohio rose rom 23 to 27, Flint and Pere Marquette referred from 48 to 45, New England rom 4314 to 45, Pacific Mail from 2716 to 291/2. Tennessee Corl and Iron from 28 to 297%. New England was in demand n reports that the Rhode Island legis lature had passed a bill satisfactory to Fennessee Coal and Iron improved on the further rise in southern pig iron The anthracite coalers were strong ex

cept for Susquehanna and Western pre-ferred, which dropped from 32% to 28% The decline was due to an un founded rumor that the interest due on the Wilkesbarre and Eastern bonds would not be paid.

Among the Trunk lines Erie was

heavy and fell to 10%. The belief is now quite general that the stockholders will be heavily assessed under the pro posed reorganization plan in order to liquidate the floating debt, as well as to provide capital for improvements. Manhattan was again heavy, the denial by a prominent director of the story that the dividend on the stock would be reduced having failed to check the provide capital for improvement elling. The stock declined to 112% and

later recovered to 114. In the industrials the special feature was the strength of Rubber, Cordage Distillers, Chicago Gas, General Electric 461/2, Distillers 1 to 211/2, General Electric 7/2 to 357/2, Chicago Gas 7/4 to 741/2, Sugar 114 to 11816, and Cordage preferred 114 to 7%@716. Rubber was bought for the pool and New England account. Gen eral Electric was higher on rumors from Boston that negotiations with the Westinghouse people will be resumed, and Chicago Gas moved up on favorable advices from Springfield in the matter of the consultation bill

Speculation closed firm and 1/4 to 1/4 per cent, for the usually active stocks. Erie lost 1% per cent, on the day. The industrials gained %@1% per cent, Paific Mail 2 and Mobile and Ohio 314 per
